ENTERPRISE SERVICE MANAGEMENT

ivanti

ivanti

ENTERPRISE SERVICE MANAGEMENT

Incident Management

Maximize employee productivity, restore services, and resolve issues/incidents expediently. Ensure all IT customers can easily contact support to report, track, and fix issues.

FEATURES/BENEFITS

- Boost employee productivity
- Restore services
- Classification and prioritization
- Single-pane agent view
- Increase incident deflection
- Improve agent productivity

KPIs

- ↑ Employee productivity
- ↑ Incident deflection
- ↑ Agent productivity
- ↑ Incident experience
- ↓ Incident handle time

BEST PRACTICES

- Classify incidents based on severity, impact, and urgency to prioritize response efforts effectively. This helps ensure that critical incidents receive immediate attention.
- Give agents and service operations teams full visibility into incidents, cases, and customer data in a single workspace. Agents are no longer left in the dark while being bombarded by frustrated customers. Service operations teams have all the context they need to resolve the problem expediently.

ivanti

Incident Management

THINGS TO CONSIDER

Are your policies and procedures documented?

□ Yes □ No

Are your incidents truly break/fix items only?

□ Yes □ No

Are tickets routed to the correct teams a majority of the time? (80/20 rule)

□ Yes □ No

Do you measure First Call Resolutions (FCRs)?

□ Yes □ No

Does your organization continuously work to reduce Mean Time to Restore (MTTR)?

□ Yes □ No

Are you tracking cost per ticket?

□ Yes □ No

ivanti

ENTERPRISE SERVICE MANAGEMENT

Problem Management

Identify, diagnose, and resolve the root causes of recurring incidents to improve overall service quality and minimize disruptions. Unlike incident management, which addresses immediate issues, problem management aims to identify underlying issues and implement appropriate solutions to prevent future incidents.

FEATURES/BENEFITS

- Eliminate recurring incidents
- Accelerate service restoration
- Create remediation plans
- Automate notifications
- Gain insights from real-time analytics

KPIs

↑ Service restoration
↑ Root cause analysis
↑ Insights and analytics
↓ Service disruptions
↓ Recurring incidents

BEST PRACTICES

- Separate incidents from problems and keep a known error knowledge database.
- Identify a dedicated problem manager to investigate and document not just the what, but also the why.
- Ensure agents and operators contribute constantly to improve a shared knowledge base.

ivanti

Problem Management

THINGS TO CONSIDER

Have you defined your policies and procedures for what constitutes a problem?

□ Yes □ No

Are you tracking root cause, impact, symptoms, and service restoration time of a problem?

□ Yes □ No

Do you have a postmortem process to identify recurring problems?

□ Yes □ No

Are problem tickets linked back to completed change requests that may have caused the widespread issue?

□ Yes □ No

Do you provide workarounds within your problem tickets?

□ Yes □ No

Do you maintain a knowledge base with problem records and solutions?

□ Yes □ No

ivanti

ENTERPRISE SERVICE MANAGEMENT

Change Management

Accelerate, simplify, and automate complex change processes, with full risk and impact info. Minimize impact of change on service quality and reduce operational costs.

FEATURES/BENEFITS

- Integrate organization-wide change processes
- Change approval policies
- Change management lifecycle
- Enhance proficiency and accuracy
- Reduce service impact

KPIs

- ↑ Change velocity
- ↑ Agent productivity
- ↑ Risk intelligence
- ↑ Employee productivity
- ↓ Technical debt
- ↓ Failure rate

BEST PRACTICES

- Automate change requests for dependencies, conflicts, and approval workflows.
- Increase change velocity by measuring change requests/orders on an organization-wide basis to improve operational efficiency.
- Make change requests automatically, screened for dependencies and conflicts, and adding the change order approver.
- Maximize automation of approvals to shorten the change management lifecycle and improve accuracy and efficiency.

ivanti

Change Management

THINGS TO CONSIDER

Have you defined your policies and procedures for change requests?

□ Yes □ No

Are you tracking the success rate % of change requests?

□ Yes □ No

Are approvals automatically routed to the correct system owners related to the change?

□ Yes □ No

Are you measuring your change velocity and thinking of ways to increase the delivery speed of change requests?

□ Yes □ No

Are you aware of the dependencies between CIs, critical IT systems, services, and infrastructure components?

□ Yes □ No

ivanti

ENTERPRISE SERVICE MANAGEMENT

Knowledge Management

Manage knowledge articles and FAQs to drive self-service for incident resolution. Boost agent productivity with AI-powered contextual knowledge.

FEATURES/BENEFITS

- Article workflow and taxonomy
- Crowd sourced knowledge
- Article approval workflow
- Streamline continuous improvements
- Analytics and dashboards

KPIs

- ↑ Incident/request deflection
- ↑ Self-service rates
- ↑ CSAT scores
- ↑ Agent productivity
- ↓ Incident handle time
- ↓ Case/incident volume

BEST PRACTICES

- Design your knowledge base with a user-centric approach.
- Make it easy to find information and navigate content, using features like content collaboration, version control, and search.
- Track usage metrics to understand how users interact with your knowledge base.
- Identify areas for improvement and adapt accordingly.
- Encourage users feedback on knowledge base content. This will help identify gaps and improve the user experience.

ivanti

Knowledge Management

THINGS TO CONSIDER

Have you established a knowledge base where information, documents, and best practices are stored and easily accessible?

□ Yes □ No

Are your knowledge articles categorized for easy search and retrieval?

□ Yes □ No

Have you implemented processes for content and quality control to ensure that information is accurate, up-to-date, and relevant?

□ Yes □ No

Do you regularly review and update processes to ensure continuous improvement and alignment with business objectives?

□ Yes □ No

Do you track key metrics and analytics related to usage, engagement, and effectiveness to measure impact and identify areas for improvement?

□ Yes □ No

ivanti

ENTERPRISE SERVICE MANAGEMENT

Self-Service (Request Management)

Provide self-service for employees and customers. Make it easy to request products, services, and answers anytime, on any device.

FEATURES/BENEFITS

- Boost user satisfaction and experience
- Meet users where they are
- Simplify approval workflows
- Service catalog workspace
- Improve productivity across the enterprise
- Improve self-service through automation

KPIs

- ↑ Service and task efficiencies
- ↑ Agent productivity
- ↑ Quick and easy approvals
- ↑ User experience
- ↑ Visibility and analysis
- ↓ Case resolution time

BEST PRACTICES

- Measure case deflection in order to continuously improve efficacy and reduce costs, including: explicit, repetitive, and implicit deflection.
- Optimize ease of use, with single sign-on mobile support, and embedded self-services within digital and physical products.
- Leverage self-service to progressively grow a user's profile.

ivanti

Self-Service (Request Management)

THINGS TO CONSIDER

Do your field users have the ability to find service offerings in a user-friendly portal?

□ Yes □ No

Is your service catalog categorized and easy to navigate?

□ Yes □ No

Are you tracking service request usage and retiring offerings that are not used?

□ Yes □ No

Are you designing offerings to capture all required information, removing the need to reach out to the requester?

□ Yes □ No

Do you offer guidance to assist users through filling out a request (using help bubbles and read-only text to guide users)?

□ Yes □ No

ivanti

ENTERPRISE SERVICE MANAGEMENT

Analyst Workspace

A comprehensive, customizable environment that enables analysts to efficiently view, organize, and analyze data to generate insights and actionable recommendations. Enable quick identification and resolution of service issues. Enhance team collaboration and decision-making, ensuring efficient service delivery and improved customer satisfaction.

FEATURES/BENEFITS

- Improve analyst efficiency
- Accelerate issue and request resolution
- Link user and device information
- Integrate communication channels
- Enable layout customization

KPIs

- ↑ First call resolution
- ↑ CSAT scores
- ↑ Field agent satisfaction
- ↓ Time to first response
- ↓ MTTR

BEST PRACTICES

- Leverage skill-based routing, screen pops to identify caller profiles, and quick action activities that encapsulate many steps in a single action.
- Save and retrieve recent activities and transfer ticket content to other teams or agents.
- Enable analysts to multitask and become more efficient.

ivanti

Analyst Workspace

THINGS TO CONSIDER

Do your analysts have a dashboard that provides all of the information they need to fulfill their day-to-day tasks?

□ Yes □ No

Are you designing dashboards for specific teams and roles, containing information and KPIs that would be most important to their jobs?

□ Yes □ No

Is your organization leveraging operational dashboards to manage workloads in an efficient manner against service quality?

□ Yes □ No

Do your team managers have a dashboard that shows Customer Satisfaction (CSAT) and workloads for their employees?

□ Yes □ No

Are you empowering your analysts with real-time data that could help identify trends, such as issues with a specific application or server?

□ Yes □ No

ivanti

ENTERPRISE SERVICE MANAGEMENT

Automation & Predictive Intelligence

Coordinate the use of multiple technologies, tools, and platforms, including machine learning (ML) and predictive intelligence, to automate business and IT processes.

FEATURES/BENEFITS

- Improve service quality
- Improve workflow design
- Boost employee and agent productivity
- Enhance decision making
- Innovation enablement
- Strategic resource allocation

KPIs

- ↑ CSAT scores
- ↑ Incident deflection
- ↑ Response time
- ↓ Resolution times
- ↓ Support costs

BEST PRACTICES

- Incorporate hyperautomation and predictive intelligence in service management to streamline operations and proactively address issues.
- Automate routine tasks and predict potential challenges to increase efficiency and reduce downtime.
- Empower service teams to leverage predictive insights to make informed decisions, optimize resource allocation, and enhance overall service quality.

ivanti

Automation & Predictive Intelligence

THINGS TO CONSIDER

Does your organization leverage automation tools to streamline repetitive tasks and processes?

□ Yes □ No

Does your organization utilize predictive analytics and intelligence to anticipate and address potential issues or disruptions before they occur?

□ Yes □ No

Is your organization's integration of automation and predictive intelligence across incident management, change management, and asset management mature?

□ Yes □ No

Does your organization measure the impact and effectiveness of automation and predictive intelligence initiatives in improving service delivery, reducing costs, and enhance overall operational efficiencies?

□ Yes □ No

Is your automation and predictive intelligence improving CSAT score across your enterprise?

□ Yes □ No

ivanti

ENTERPRISE SERVICE MANAGEMENT

Configuration Item (CI) Inventory

A digital enterprise management capability helps you to discover and manage all CIs. Inventory all network devices across multiple operating systems and industry protocols (e.g. Windows, Linux, Android, Mac, IOS, SNMP, IoT).

FEATURES/BENEFITS

- Build a single source of truth
- Improve visibility across multi-cloud environments
- Ingest 3rd party data
- Interrogate data to create operational efficiencies

KPIs

- ↑ Actionable insights
- ↑ Security compliance
- ↑ Scalability
- ↑ Resource bandwidth
- ↓ Time to value
- ↓ Unknown endpoints

BEST PRACTICES

- Discover your entire IT infrastructure, creating an accurate and up-to-date record in your CMDB.
- Discover both physical and logical components, including virtual machines, servers, storage, databases, applications, and more.
- Leverage the data to identify environment inconsistencies, optimize processes, and reduce risk.

ivanti

Configuration Item (CI) Inventory

THINGS TO CONSIDER

Have you defined the components you want to keep in CI inventory?

□ Yes □ No

Is your CI inventory updated on a regular cadence?

□ Yes □ No

Do you have a process in place to prevent duplicate records and/or data being overwritten by more than one source?

□ Yes □ No

Are you getting value from your CI records?

□ Yes □ No

Is your CI solution scalable?

□ Yes □ No

Do you have a defined process around adding new CIs and updating existing CI content/status?

□ Yes □ No

ivanti

ENTERPRISE SERVICE MANAGEMENT

Field Worker and Agent Mobility

Enhance the ability of agents and field workers to complete key work functions from anywhere. Give agents a mobile interface to triage, address, and resolve requests on the go.

FEATURES/BENEFITS

- Manage team performance
- Maximize efficiency
- Simplify work
- Increase productivity

KPIs

- ↑ Field employee productivity
- ↑ Field service management
- ↑ Field team performance
- ↓ Incident handle time

BEST PRACTICES

- Leverage mobile hardware/software in a range of applications including touchscreens for eSignature, barcode scanning for inventory management, notifications for real-time work changes and collaboration, access to service requests, incidents, and tasks to support work regardless of network connectivity (offline).
- Empower field personnel to work from any location without losing the ability to perform basic work functions.

ivanti

Field Worker and Agent Mobility

THINGS TO CONSIDER

Do your users have the ability to complete required work from anywhere?

□ Yes □ No

Do your users have the equipment necessary to complete tasks and answer calls remotely from a modern virtual office?

□ Yes □ No

Do you measure the effectiveness and efficiency of your remote workers and compare against office-based agents?

□ Yes □ No

Do your users have real-time communication and collaboration tools?

□ Yes □ No

Do you effectively allocate field workers based on priority, location, and availability?

□ Yes □ No

ivanti

ENTERPRISE SERVICE MANAGEMENT

Service Level Management

Ensure all service management activities and service delivery processes are aligned with service level agreements to deliver reliable and predictable business outcomes. This involves monitoring, reporting, and managing the performance of services to ensure they meet or exceed predefined quality standards and customer expectations.

FEATURES/BENEFITS

- Strengthen the service provider business relationship
- Improve visibility of service timeline
- Enhance organizational performance
- Centralize SLA management

KPIs

- ↑ Workload visibility
- ↑ CSAT scores
- ↑ Service delivery
- ↑ Proactive service issues
- ↓ Number of SLA breaches

BEST PRACTICES

- Set up SLAs with customers to define commitments to entitlements, milestones, and asset delivery.
- Increase productivity by managing cases that agents use to interact with customers to resolve service issues and ensure customers receive expected service outcomes.

ivanti

Service Level Management

THINGS TO CONSIDER

Do you have SLAs defined?

□ Yes □ No

Are you tracking delivery/handle time for your service requests?

□ Yes □ No

Do your teams gather customer feedback through surveys?

□ Yes □ No

Are you tracking MTTR for common incident types?

□ Yes □ No

Are SLAs visible to the request/incident submitter, and are they accurate?

□ Yes □ No

ivanti

ENTERPRISE SERVICE MANAGEMENT

Service Quality & Analytics

Service quality is crucial for customer satisfaction and retention, demanding consistent excellence in every customer interaction. By leveraging advanced analytics, businesses can gain deep insights into service performance, identify areas for improvement across the various customer support roles, and subsequently enhance the overall customer experience.

FEATURES/BENEFITS

- Improve resource utilization
- Interrogate data to create service and operational efficiencies
- Customizable on-demand analytics
- Enhance decision-making through improved visibility

KPIs

↑ Agility and visibility
↑ Employee experience
↑ Employee satisfaction
↓ Average handling time

BEST PRACTICES

- Analyze the agent and customer experience, including sentiment to develop comprehensive training, resolve customer issues efficiently, and ensure high service quality.
- Integrate customer feedback into your analytics processes to continuously identify and address areas for improvement.

ivanti

Service Quality & Analytics

THINGS TO CONSIDER

Do you leverage data from service quality analytics to make decisions and drive improvements?

□ Yes □ No

Do you collect, analyze, and report on service quality metrics?

□ Yes □ No

Do you have standardized processes in place for monitoring, measuring, and improving service quality across your organization?

□ Yes □ No

Are you fostering a culture of continuous improvement regarding service quality?

□ Yes □ No

ivanti

ENTERPRISE SERVICE MANAGEMENT

Enterprise Onboarding, Transitions & Offboarding

A streamlined, agile process for integrating new employees or transitioning existing employees efficiently. It outlines key activities, logical workflow, configuration of services, and asset deployment. This process is essential for maintaining high service standards and achieving employee satisfaction during the onboarding, transition, and offboarding phases.

FEATURES/BENEFITS

- End-to-end visibility
- Step-by-step guidance
- Simplify onboarding through automation
- Centralized employee lifecycle
- Customizable workflow design

KPIs

- ↑ Employee experience
- ↑ Enterprise productivity and efficiency
- ↑ Employee 1st day experience
- ↑ Employee retention
- ↑ CSAT scores
- ↓ Time to value

BEST PRACTICES

- Ensure that the onboarding process is scalable and flexible.
- Use logical workflows to create a personalized experience that is accessible on any device.
- Enable coordination between all departments that are part of the onboarding, transition, and offboarding processes.

ivanti

Enterprise Onboarding, Transitions & Offboarding

THINGS TO CONSIDER

Do you sequence onboarding and transition tasks efficiently to grant access to applications devices?

□ Yes □ No

Are your tasks automatically assigned to the correct teams in all situations?

□ Yes □ No

Do you reduce human error during the onboarding process to limit HR corrections (preferred name, DOB, address confirmation, etc.)?

□ Yes □ No

Can you efficiently set up a new hire to be ready to work in a reasonable timeframe?

□ Yes □ No

Do you have a process for removing application privileges for an existing employee if they are moving to a new role within the organization?

□ Yes □ No

Is your data accurate and are you leveraging a single source of truth?

□ Yes □ No

ivanti

ENDPOINT MANAGEMENT & SECURITY

ivanti

ivanti

ENDPOINT MANAGEMENT & SECURITY

Unified Endpoint Management (UEM)

See, manage, configure, and secure every device from one simple interface. Enforce policies and privileges everywhere in a few clicks. Discover and patch threats predictively and quickly.

FEATURES/BENEFITS

- Distribution and provisioning
- Analytics and reporting
- Application management
- Device lifecycle management

KPIs

- ↑ Device compliance
- ↑ ISO compliance
- ↑ Employee/Agent productivity
- ↑ Streamlined operations
- ↑ CSAT scores
- ↓ Operational costs
- ↓ Cybersecurity gaps

BEST PRACTICES

- Find and track all devices that connect to your IT estate and keep them safe by installing and maintaining the latest operating systems, security software, and patches.
- Augment with Zero Trust security principles on user privileges. Educate users about vulnerabilities such as unregulated USB port access.
- Discover and fix vulnerabilities rapidly while maintaining an audit trail. Maintain up-to-date CI inventory for an accurate CMDB landscape.

ivanti

Unified Endpoint Management (UEM)

THINGS TO CONSIDER

Does your organization have a UEM solution in place?

□ Yes □ No

Does your UEM solution help ensure compliance with internal security policies?

□ Yes □ No

Does your UEM solution allow management of multiple operating systems?

□ Yes □ No

Are you able to manage all areas of UEM (SWD, patch, OS provisioning, reporting, etc.)?

□ Yes □ No

Do you have the appropriate administration (role-based access) configured?

□ Yes □ No

Are you leveraging the vendor/partner landscape to drive adoption and value?

□ Yes □ No

ivanti

ENDPOINT MANAGEMENT & SECURITY

Endpoint Security

Comprehensively enforce security policies that establish a baseline of normal activity within your organization. Continuously monitor and analyze systems to prevent malicious actors from exploiting legitimate tools and resources. Allow options for temporary or role based access.

FEATURES/BENEFITS

- Detect device and user behaviors
- Risk mitigation
- Allow device and action control
- Improve compliance management

KPIs

↑ Employee productivity
↑ Device compliance
↑ Data visibility
↓ IT costs
↓ Organizational risk

BEST PRACTICES

- Implement strong access controls such as multi-factor authentication (MFA) and role-based permissions to limit unauthorized access to sensitive data and devices.
- Continuously monitor activity and conduct regular security audits to swiftly detect and respond to anomalies.
- Provide ongoing security training and awareness programs to educate employees on practices and foster a security-conscious organizational culture.

ivanti

Endpoint Security

THINGS TO CONSIDER

Do you have visibility into your security posture for each device, regardless of type and OS? (e.g., Mobile, Client, Server, Win, Mac, Android)

□ Yes □ No

Are you managing the security risks associated with third-party vendors?

□ Yes □ No

Can you see and manage all corporate devices regardless of location?

□ Yes □ No

Are you leveraging technologies and tools for threat detection and prevention on endpoints, such as antivirus software, anti-malware, and endpoint detection and response (EDR) solutions?

□ Yes □ No

Are you effectively managing patches and performing vulnerability assessment and remediation on endpoints?

□ Yes □ No

ivanti

ENDPOINT MANAGEMENT & SECURITY

Zero Trust Network Access (ZTNA)

Provide users access to specific applications hosted on public cloud or enterprise environments based on user location, device, or access privileges. Continuously assess for risks and allow admins to create policies to define access decisions.

FEATURES/BENEFITS

- Security framework compliance
- Continual risk assessment
- Public and customer facing conditional access
- Centralize administration
- Support hybrid and remote working

KPIs

- ↑ Visibility and analytics
- ↑ User productivity
- ↑ Securing enterprise environments
- ↓ Service disruptions
- ↓ Insider threat risks

BEST PRACTICES

- Ensure device security compliance before granting access to specified applications through granular segmentation with authenticated user identity.
- Continually monitor sessions for risks, enabling administrators to create policies informed by real-time risk analysis. This approach enhances anomaly and threat detection, offers end-to-end visibility, facilitates rapid threat mitigation, and reduces organizational risk and potential fines.

ivanti

Zero Trust Network Access (ZTNA)

THINGS TO CONSIDER

Do you manage and authenticate identities in a Zero Trust model?

□ Yes □ No

Have you modernized your network architecture to provide secure access for your user roles regardless of location?

□ Yes □ No

Is your Zero Trust architecture integrated with your existing security tools and systems?

□ Yes □ No

Do you ensure user security parameters before connecting to network resources and applications?

□ Yes □ No

Do you leverage User and Entity Behavior Analytics (UEBA) to detect and respond to unusual behavior or potential threats?

□ Yes □ No

ivanti

ENDPOINT MANAGEMENT & SECURITY

Physical Asset Inventory

The systematic process an organization uses to track and control its physical assets throughout their lifecycle, from acquisition to disposal. It involves the identification, documentation, and monitoring of assets to ensure they are accounted for, allocated efficiently, and replacements available on-demand.

FEATURES/BENEFITS

- Inventory and regional distribution centers
- Financial asset management
- Operational efficiency and equipment status
- Loss prevention, governance, and compliance

KPIs

- ↑ Asset availability
- ↑ New hire onboarding experience
- ↑ User experience and productivity
- ↓ Emergency purchases
- ↓ Costs and overtime expenses
- ↓ Business user downtime

BEST PRACTICES

- Effective physical asset management involves regular maintenance, thorough documentation, and strategic planning to extend asset lifecycle and optimize performance.
- Utilize technology such as asset management software, barcode scanners, and RFID tags to streamline tracking and reporting, ensure timely updates and make informed decisions.
- Foster a culture of accountability and continuous improvement within the organization to encourage proactive asset care and reduce the risk of unexpected downtimes.

ivanti

Physical Asset Inventory

THINGS TO CONSIDER

Are you enabling savings, creating value, and delivering a positive user experience by reducing expedited shipping from multiple locations?

□ Yes □ No

Is your field inventory accurate?

□ Yes □ No

Do you leverage a framework or process to forecast inventory needs and plan for replenishments?

□ Yes □ No

Do you integrate a replenishment threshold and process with your suppliers/vendors to keep inventory available?

□ Yes □ No

Do you have a scanning tool to update inventory in a timely manner?

□ Yes □ No

ivanti

ENDPOINT MANAGEMENT & SECURITY

IT Asset Management (ITAM)

Use core IT asset management to support financial, contractual, and risk management activities. Manage the lifecycle of IT assets, from request to disposal, across all organizations. Automate processes to increase IT efficiencies, enhance employee experience, and reduce security risk.

FEATURES/BENEFITS

- End-to-end asset lifecycle and vendor management
- Total cost of ownership
- Discovery and inventory
- Audit and compliance
- Mitigate IT asset risk
- Track purchase details and warranty status

KPIs

- ↑ Asset visibility
- ↑ End user experience
- ↑ Asset cost visibility
- ↑ Operational efficiencies
- ↓ Non-budgeted replacement expenses
- ↓ Support costs
- ↓ Security risk

BEST PRACTICES

- Regularly update and maintain a centralized asset repository to ensure accurate tracking and management of all IT assets throughout their lifecycle.
- Conduct periodic audits and assessments to identify and address any discrepancies, optimize asset utilization, and support informed decision-making.

ivanti

IT Asset Management (ITAM)

THINGS TO CONSIDER

Are you assigning the cost of the asset to an owner/ department?

□ Yes □ No

Do you know how many assets your organization owns and where they are?

□ Yes □ No

Are you managing your assets through the various stages of the lifecycle from procurement to disposal?

□ Yes □ No

If a device is lost or stolen, do you have the ability to identify asset assignment and wipe it remotely?

□ Yes □ No

Do you use a dynamic asset management database?

□ Yes □ No

ivanti

ENDPOINT MANAGEMENT & SECURITY

Software Procurement

The process of identifying, acquiring, and managing software licenses and types for an organization. This process typically involves evaluating the organization's needs, researching potential software solutions, negotiating contracts, and ensuring compliance with licensing agreements.

FEATURES/BENEFITS

- Financial management of software
- Maintain high operational efficiency
- Accurate ongoing inventory of software
- Governance and compliance
- Automate replenishment of licenses

KPIs

- ↑ Software availability
- ↑ New hire onboarding experience
- ↑ User experience and productivity
- ↓ Emergency purchases
- ↓ Costs and audit expenses
- ↓ Business user downtime

BEST PRACTICES

- Establish a comprehensive inventory management system to track all software assets, including licenses, usage, and expiration dates.
- Regularly review and update this inventory to ensure accurate count and compliance, and to track available licenses.
- Implement a software lifecycle management plan, from acquisition through deployment, usage, and eventual retirement, ensuring optimal performance and cost-efficiency.

ivanti

Software Procurement

THINGS TO CONSIDER

Do you know what your software entitlement license portfolio entails?

□ Yes □ No

Have you established a centralized software procurement team or process?

□ Yes □ No

Do you effectively inventory, transition, and audit software licenses?

□ Yes □ No

Have you established your software asset management lifecycle, from procurement to retirement?

□ Yes □ No

Do you have a threshold for automatic software procurement on high volume software assets?

□ Yes □ No

ivanti

ENDPOINT MANAGEMENT & SECURITY

Digital User Experience Management (DEX)

Track, measure, and optimize your employees' digital experience to improve productivity, security, and employee retention. Enhance the digital experience across the devices and applications they rely on in their work environment.

FEATURES/BENEFITS

- Improve end user efficiency
- Integrate communication channels
- Omnichannel self-service assistance
- Proactive diagnostics and remediation

KPIs

↑ Employee productivity
↑ Employee CSAT
↑ Resource bandwidth
↓ Resourcing costs
↓ Incident count
↓ Undetected service impacts

BEST PRACTICES

- Aggregate and monitor usage, performance, and security data from all the devices and applications your employees rely on in their work environment.
- Go beyond post-ticket surveys and collect contextual sentiment to gauge employees' digital experience and improve CSAT.
- Drive continuous improvement and predict productivity degradation.
- Surface potential IT and security issues and make recommendations on actions to remediate.

ivanti

Digital User Experience Management (DEX)

THINGS TO CONSIDER

Do you have an enablement program around digital user experience management?

□ Yes □ No

Are experiences on digital devices replicated across all platforms?

□ Yes □ No

Does your digital experience offer a seamless sign-on and secure authentication?

□ Yes □ No

Do you monitor and resolve potential problems before they impact end users?

□ Yes □ No

Do you offer digital self-service?

□ Yes □ No

Are you able to health score your digital devices under management?

□ Yes □ No

ivanti

ENDPOINT MANAGEMENT & SECURITY

Proactive & Remote Support

Anticipate potential issues and resolve them before they impact users. Minimize disruptions and improve the overall user experience. Provide support to users from different locations using various remote access and monitoring tools and techniques. Resolve issues quickly and efficiently across a hybrid, multi-office workforce.

FEATURES/BENEFITS

- Audit log of remote sessions
- Option to record remote control sessions
- Compliance with security policies
- Proactive and reactive tools

KPIs

- ↑ Agent productivity
- ↑ CSAT scores
- ↑ Operational efficiencies
- ↑ Business user productivity
- ↓ Travel costs
- ↓ Manual effort

BEST PRACTICES

- Monitor systems for potential issues before they impact users.
- Minimize disruptions and ensure quick, seamless resolution through predictive maintenance.
- Leverage advanced analytics and ML to become more agile, anticipatory, and efficient in resolving issues.
- Use remote diagnostic/control tools to streamline reactive support processes and drive continual improvement.

ivanti

Proactive & Remote Support

THINGS TO CONSIDER

Have you developed a process for using automated scripts to remediate common issues and tasks?

□ Yes □ No

Do you have proactive scripts that integrate user interaction to resolve predefined issues documented in your knowledge base?

□ Yes □ No

Have you established an integrated suite of proactive monitoring and management tools that continuously track system health and performance?

□ Yes □ No

Do you enforce the security of remote sessions by integrating Role-Based Access Control (RBAC)?

□ Yes □ No

Do you have a solution that enables recording remote control sessions to improve the support experience and train new staff?

□ Yes □ No

ivanti

ENDPOINT MANAGEMENT & SECURITY

Dependency and Service Mapping

The scanning, classification, and identification of networks that are loaded into the CMDB. Visualize relationships and connectivity points across infrastructure and domains showing application and service dependency mapping.

FEATURES/BENEFITS

- Network, CI, and Cloud Discovery
- Agentless scanning
- Dependency mapping
- Enhanced real time visibility
- Improved root cause identification

KPIs

- ↑ CSAT
- ↑ CMDB efficiency
- ↑ Actionable insights
- ↑ Security compliance
- ↓ Downtime
- ↓ Unknown endpoints

BEST PRACTICES

- Schedule regular automated scans to maintain up-to-date maps.
- Leverage visualization for clear insights, and to ensure seamless integration with ITSM systems and CMDBs.
- Implement real-time monitoring, strict access controls, and continuous process improvements through feedback and training.
- Use dependency mapping for strategic planning and align your practices with industry standards.

ivanti

Dependency and Service Mapping

THINGS TO CONSIDER

Do you know what services are impacted by an outage before your end users do?

□ Yes □ No

Do you have a process for relationship mapping with servers, applications, and other infrastructure connections?

□ Yes □ No

Is dependency and service mapping visibility used within your change and problem management processes?

□ Yes □ No

Is your service mapping integrated with process optimization?

□ Yes □ No

Do you frequently update your dependency map?

□ Yes □ No

ivanti

ENDPOINT MANAGEMENT & SECURITY

Bring Your Own Device (BYOD) Management

Use a comprehensive UEM solution with capabilities that not only secure applications and data on a personal device, but also provide analytics and mobile threat defense to ensure that no employee brings a risky or compromised device into a secure environment. Segregate and control company data on the user's personal device.

FEATURES/BENEFITS

- Enforce acceptable use policies
- Increase security in the everywhere workplace
- Company/personal data segregation

KPIs

- ↑ Device model compliance
- ↑ Data security
- ↑ Employee/agent productivity
- ↑ User experience
- ↓ Hardware expenses

BEST PRACTICES

- Establish clear policies, definitions, and classifications for personal and corporate data, ensuring employee privacy and regulatory compliance.
- Implement real time monitoring and mandate data encryption with the ability to remove company data from lost devices.
- Enforce company policies with employee transition/termination and lost device notification.
- Enable remote wipe of company data.
- Educate employees about data policies and processes.

ivanti

Bring Your Own Device (BYOD) Management

THINGS TO CONSIDER

Do you allow BYOD devices in your environment?

□ Yes □ No

Have you defined your BYOD policy and procedures?

□ Yes □ No

Do you have a defined BYOD support practice to provide support for various types of personal devices used by employees?

□ Yes □ No

Do you manage the use of third-party applications and services on BYOD devices to ensure they meet your security and compliance standards?

□ Yes □ No

ivanti

ENDPOINT MANAGEMENT & SECURITY

Mobile & Field Device Security

Safeguard mobile devices such as smartphones and tablets that connect to enterprise networks from common threats. Ensure proper mobile security such as MFA to protect sensitive computer data.

FEATURES/BENEFITS

- Enforce policies to enhance security
- Manage complete device lifecycle
- Flexible app/device deployment
- Reduce risk from lost devices
- Enhance security and access to resources
- Integrate new capabilities

KPIs

- ↑ Device health and compliance
- ↑ CSAT scores
- ↑ Employee productivity
- ↓ IT and organizational cost

BEST PRACTICES

- Implement comprehensive policies that include device encryption, strong authentication methods, and regular software updates to ensure robust mobile endpoint security.
- Employ centralized mobile management solutions to monitor, manage, and enforce security policies across all devices.
- Educate employees on the importance of security practices such as avoiding suspicious downloads and using secure, encrypted networks to protect sensitive data.

ivanti

Mobile & Field Device Security

THINGS TO CONSIDER

Do you have an MDM solution in place today?

□ Yes □ No

Are you leveraging technologies to detect and prevent security threats, such as anti-malware and mobile threat defense?

□ Yes □ No

Do you manage access control and authentication for mobile devices, including biometric authentication and multi-factor authentication (MFA)?

□ Yes □ No

Are you ensuring data segregation and encryption based on device ownership to protect sensitive corporate information?

□ Yes □ No

Do you manage and secure applications on mobile devices, including the use of app whitelisting and blacklisting?

□ Yes □ No

ivanti

ENDPOINT MANAGEMENT & SECURITY

Internet Security / IIoT Access Security

Secure your enterprise estate focused on IoT and connected networks from threats and breaches. Identify, protect, and monitor risks while proactively fixing vulnerabilities from a wide range of devices.

FEATURES/BENEFITS

- Understand endpoints
- Track and manage devices
- Identify IT security voids
- Patch and remediate
- Risk-based strategy posture

KPIs

- ↑ Patching cadence
- ↑ Security compliance
- ↓ Mean time to detect (MTTD)
- ↓ Mean time to remediate (MTTR)
- ↓ Unidentified devices/intrusion attempts
- ↓ Security incidents

BEST PRACTICES

- Secure IoT endpoints by keeping them updated.
- Use encryption, automate security with antivirus software, and keep tabs on all connected devices,
- Take advantage of authentication tools.
- Regularly audit actions on your network and disable unused devices and other entry points.

ivanti

Internet of Things/ IIoT Access Security

THINGS TO CONSIDER

Have you modernized your network architecture and security to ensure that IoT connected devices such as sensors, card readers, cameras, and HVAC controls cannot cause disruption or security breaches?

□ Yes □ No

Do you identify, document, and classify all IoT endpoints on your network?

□ Yes □ No

Are security policies enforced for IoT endpoints to mitigate risk?

□ Yes □ No

Do you have continuous monitoring and threat detection for IoT devices?

□ Yes □ No

Are measures taken for network segmentation and access control for IoT?

□ Yes □ No

Do you perform regular security assessments and audits of your IoT environment?

□ Yes □ No

ivanti

EXPOSURE MANAGEMENT

ivanti

ivanti

EXPOSURE MANAGEMENT

Risk Based Vulnerability Management (RBVM)

Protect your organization from vulnerabilities and weaknesses that pose the greatest risk to better guard against data breaches, ransomware, and other cyber threats.

FEATURES/BENEFITS

- Enhance device security
- Threat intelligence
- Resource optimization
- Analyze and prioritize risk
- Threat aggregation

KPIs

- ↑ Organizational visibility
- ↑ CSAT scores
- ↑ Support agent bandwidth
- ↑ Security and IT agility
- ↑ Security compliance
- ↓ Organizational risk

BEST PRACTICES

Evolve your vulnerability management strategy by continuously correlating your organization's infrastructure with vulnerability data, threat intelligence, and pen test findings. A comprehensive approach will:

- help to ensure compliance and prevent fines;
- enable precise risk measurement, early warnings, attack prediction, and prioritized remediation activities; and
- enhance your proactive defense mechanisms and ensure focused protection of critical assets.

ivanti

Risk Based Vulnerability Management (RBVM)

THINGS TO CONSIDER

Do you have insights into device vulnerability management across your enterprise?

□ Yes □ No

Are you tracking and assessing your ransomware exposure?

□ Yes □ No

Do you manage the risks associated with third-party vendors and their vulnerabilities?

□ Yes □ No

Do you schedule penetration testing exercises to assess your vulnerability management efforts and reduce risk?

□ Yes □ No

Do you ensure that all assets are included in your vulnerability management scope?

□ Yes □ No

Do you integrate vulnerability management with your incident response plan to ensure rapid action upon discovering high-risk vulnerabilities?

□ Yes □ No

ivanti

EXPOSURE MANAGEMENT

Attack Surface Management

Proactively mitigate cyber threats and prevent data breaches, fines, and downtime with comprehensive visibility into external-facing assets. Continuously monitor internet-facing assets, including shadow IT, to uncover risk and vulnerabilities often missed by traditional discovery tools and to reduce associated exposures.

FEATURES/BENEFITS

- Discovery of known and unknown external-facing assets
- Full visibility of exposures on external-facing assets
- Actionable intelligence on exposures
- Risk assessments on partners, vendors, and subsidiaries
- Detect data leakage
- Meet security compliance requirements

KPIs

- ↑ Percentage of known and managed assets
- ↑ Efficient incident response and mitigation
- ↓ Operational costs
- ↑ Compliance and regulatory adherence
- ↓ Phishing & social engineering attacks
- ↓ Shadow IT & cloud sprawl

BEST PRACTICES

- Regularly update your inventory of internet-facing assets (e.g., web applications, APIs, servers, and cloud infrastructure).
- Use real-time monitoring tools with threat intelligence to identify and trigger alerts of suspicious activity.
- Address vulnerabilities and manage shadow IT through risk assessments to ensure regulatory compliance.
- Undertake regular audits and employee training.

ivanti

Attack Surface Management

THINGS TO CONSIDER

Do you maintain continuous visibility into your internet-facing assets?

□ Yes □ No

Do you have a defined process for prioritizing risks related to your attack surface?

□ Yes □ No

Are you conducting risk assessments on subsidiaries, mergers and acquisitions (M&A), partners, and vendors before integrating their systems?

□ Yes □ No

Is there any automation in place for threat detection and response?

□ Yes □ No

Do you use threat intelligence feeds to assess the risk prioritization on your assets?

□ Yes □ No`

Do you conduct regular security audits or check compliance on your external facing assets?

□ Yes □ No

ivanti

EXPOSURE MANAGEMENT

Patch & Deployment Controls

Ensure the stability, security, and compliance of an organization's IT environment by automating and simplifying the deployment of patches, vulnerability remediation, and application updates, managed from a central location. These processes involve systematically managing software updates and deploying new applications or changes in a controlled manner.

FEATURES/BENEFITS

- Risk mitigation
- Improve compliance reporting
- Centralized deployment
- App and OS version control
- Prioritization and evaluation of patches

KPIs

- ↑ Employee productivity
- ↑ Device health
- ↓ Resource hours
- ↓ Organizational risk
- ↓ Manual activities
- ↓ Network traffic

BEST PRACTICES

- Build, schedule, and test various remediation and OS patching cycles using scan – analyze – test – repair – scan methodology.
- Leverage release orchestration to coordinate automated and on-demand tasks performed by multiple systems to deliver software updates and vulnerability remediation.
- Plan deployment around maintenance windows and change management cycles to create a positive customer experience.

ivanti

Patch & Deployment Controls

THINGS TO CONSIDER

Have you defined your various release policies (standard patches, emergency patches, and maintenance patches)?

□ Yes □ No

Do you have mechanisms to enhance governance and alignment in compliance reporting activities?

□ Yes □ No

Have you established scheduling of patch and deployment cycles and do you leverage auto-deployments that require zero user interaction?

□ Yes □ No

Do you have the ability to patch third-party devices and applications?

□ Yes □ No

Do you have the ability to patch and deploy to various operating systems across all device types?

□ Yes □ No

ivanti

EXPOSURE MANAGEMENT

Application Security Posture Management

Enable fast, informed decisions to improve the security of internal and customer-facing applications through measures and guidance designed to protect applications from threats and vulnerabilities throughout the development lifecycle.

FEATURES/BENEFITS

- Visibility of application risk exposure and rating
- Threat intelligence
- Automated security testing
- Diverse data sources
- Customizable data organization and dashboards

KPIs

- ↑ Number of vulnerabilities detected
- ↑ Compliance audit pass rate
- ↓ Mean time to detect (MTTD)
- ↓ Mean time to remediate (MTTR)
- ↓ Organizational risk
- ↓ Security debt
- ↓ Signal-to-noise ratio
- ↓ Misconfigurations per deployment

BEST PRACTICES

- Constantly scan your application assets throughout the development lifecycle for misconfigurations, vulnerabilities, and exposures.
- Contextualize your organization's applications with internal and external vulnerability data, threat intelligence, penetration test findings, and your unique asset criticality.
- Build custom dashboards to give all security stakeholders access to relevant information to make informed decisions.

ivanti

Application Security Posture Management

THINGS TO CONSIDER

Do you have native application development in your organization?

□ Yes □ No

Are you following best practices such as OWASP frameworks for secure coding and application security?

□ Yes □ No

Do you prioritize, fix, and track issues throughout the software development lifecycle?

□ Yes □ No

Are you currently using a SAST/DAST/OSS scanner to get data?

□ Yes □ No

Are you using any tool to prioritize vulnerabilities found?

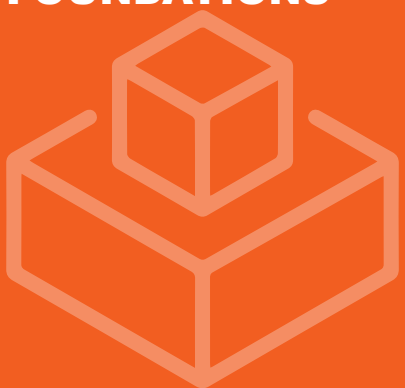
□ Yes □ No

Do you periodically pentest your applications?

□ Yes □ No

ivanti

FOUNDATIONS



ivanti

ivanti

FOUNDATIONS

Governance, Risk & Compliance (GRC)

Strategies, processes, and tools that organizations employ to ensure they operate within legal boundaries, manage risks effectively, and adhere to established policies and standards.

FEATURES/BENEFITS

- Streamline compliance
- Modernize risk assessment
- Automate governance
- Improve audit efficiency
- Centralize documentation
- Optimize resource allocation

KPIs

- ↑ Business user productivity & retainment
- ↑ Security compliance
- ↑ Visibility into GRC processes
- ↑ Resource bandwidth
- ↓ Support calls
- ↓ Audit resource constraints and true-up cost
- ↓ Risk of data and productivity loss from a cyber event

BEST PRACTICES

- Integrate governance frameworks to oversee decision-making.
- Adopt risk management practices to identify and mitigate potential threats, and to measure compliance with regulatory requirements.
- Consolidate regulatory documentation, align requirements like HIPAA, SOX, and GDPR with security best practices, and proactively manage risk to minimize security breaches.
- Foster clear communication and collaboration across departments ensuring improved visibility, efficiency, and a detailed compliance framework.

ivanti

Governance Risk & Compliance (GRC)

THINGS TO CONSIDER

Do you maintain regulatory documents and compliance controls in a single system?

□ Yes □ No

Do you automate your governance, risk, and compliance process?

□ Yes □ No

Are you tracking the impact of GRC incidents?

□ Yes □ No

Are your GRC activities and processes visible to all relevant stakeholders?

□ Yes □ No

Are you regularly updating and verifying your compliance posture?

□ Yes □ No

ivanti

FOUNDATIONS

Data Management

The practice of collecting, organizing, protecting, and storing an organization's data. With effective data management, people across an organization can find and access trusted data for their queries to make informed decisions and enhance operational efficiency.

FEATURES/BENEFITS

- Governance framework
- Normalization
- Integrity
- Availability
- Quality assurance
- Confidentiality

KPIs

- ↑ Data hygiene
- ↑ Security
- ↑ Scalability
- ↓ Access and retrieval time
- ↓ Organizational risk
- ↓ Duplication and redundancy

BEST PRACTICES

- Implement a process to improve the quality of your data.
- Ensure that formatting inconsistencies and spelling errors do not impact results.
- Schedule audits for accuracy so that data does not become stale and impact analytics.
- Data should be accessible inside your organization with the correct level of access.
- Verify that processes meet compliance requirements. Train your teams to properly handle data.
- Be prepared for the worst-case scenario by having a strategy in place to handle potential breaches or integrity issues.

ivanti

Data Management

THINGS TO CONSIDER

Do you currently have a data governance framework in place?

□ Yes □ No

Are there clear data ownership roles defined within your organization?

□ Yes □ No

Do you have mechanisms in place to ensure the integrity of your data throughout its lifecycle?

□ Yes □ No

Is there a disaster recovery plan in place for data loss scenarios?

□ Yes □ No

Do you have data retention policies for outdated or redundant data?

□ Yes □ No

ivanti

FOUNDATIONS

Continual Improvement Management & Process Optimization

Continuously review processes, products, and services to drive incremental and step-change operational improvements.

FEATURES/BENEFITS

- Enhance collaboration across the organization
- Streamline business processes
- Improve roadmap visibility
- Data-driven insights

KPIs

- ↑ Agent productivity
- ↑ Operational efficiencies
- ↑ Process maturity
- ↑ CSAT scores
- ↑ IT confidence
- ↑ Cross-organizational partnership
- ↓ Operational costs

BEST PRACTICES

- Create a structured framework to streamline ongoing delivery improvements.
- Keep initiatives aligned and on track while powering better decisions and breaking down silos.
- Develop feedback mechanisms to capture areas for improvement.

ivanti

Continual Improvement & Process Optimization

THINGS TO CONSIDER

Is there a process in place to identify pain points and opportunities for improvement within your organization?

□ Yes □ No

Do you have a recurring meeting cadence to review operational procedures and/or high volume tasks?

□ Yes □ No

Do you leverage a methodology for continual improvement? (Agile, Lean, Six Sigma, Total Quality Management, Kaizen, etc.)

□ Yes □ No

Do your organization/department goals incorporate some type of continual improvement to add value?

□ Yes □ No

Do you have buy-in at an executive level for continual improvement?

□ Yes □ No

ivanti

FOUNDATIONS

Business Continuity

An organization's ability to continue operations and delivery of products or services at acceptable levels following unintended disruptive events.

FEATURE/BENEFITS

- Integrate risk and service management
- Operationalize disaster recovery and crisis management
- Consolidate planning data
- Identify business critical systems and data

KPIs

↑ User experience
↑ Organizational visibility
↑ Business agility
↓ Organizational risk

BEST PRACTICES

- Establish and maintain a detailed business continuity plan integrated with service management processes to ensure operational resilience.
- Regularly test and update the plan through simulations and reviews, ensuring all staff are trained and prepared.
- Continuously monitor and improve both continuity strategies and service management frameworks based on performance metrics and feedback.

ivanti

Business Continuity

THINGS TO CONSIDER

Do you have a modernized network architecture to ensure business continuity in the face of unexpected disruption?

□ Yes □ No

Have you developed a unified business continuity and disaster recovery (BC/DR) plan that aligns with your risk management and service management frameworks?

□ Yes □ No

Do you have robust procedures included in your DR and crisis management plans, and are they tested often?

□ Yes □ No

Have you identified your priority one systems that run the business in case of a DR event?

□ Yes □ No

Do you have a process in place to ensure the data necessary to run business critical systems are in sync and available?

□ Yes □ No

ivanti

Network Discovery

Network discovery contains two scanning methods: Active and Passive. Active scanning probes the network to discover active devices using ports and protocols. Passive scanning uses elected devices to listen to and identify nodes that appear on the subnet.

FEATURES/BENEFITS

- Use active and/or passive scanning
- Minimize bandwidth consumption
- Uses horizontal and top-down discovery
- Populate CI using network probes
- Enhance CI Insights

KPIs

- ↑ Operational efficiencies
- ↑ Security compliance
- ↑ Actionable insights
- ↑ Service availability
- ↓ Time to value
- ↓ Unknown endpoints
- ↓ Security risk

BEST PRACTICES

- Orchestrate active and passive scanning to balance maintaining a comprehensive view of the network with minimizing end user disruption.
- Identify unauthorized devices and unusual activity. This capability is crucial for network management, optimization, and reducing risk. Use various techniques to map the network topology, understand device configurations, and monitor status.

ivanti

Network Discovery

THINGS TO CONSIDER

Do you accurately discover what is connected to your network?

□ Yes □ No

Do you have devices or nodes on your network that are listening for new connections to your network?

□ Yes □ No

Are your scans scheduled to run regularly with minimal impact on network bandwidth?

□ Yes □ No

Are the existing records in CMDB and CI databases updated to reflect any changes provided by the scan results?

□ Yes □ No

Do you use the right credentials for scans to obtain the maximum amount of information?

□ Yes □ No

ivanti

FOUNDATIONS

Third Party Connectors, APIs & Integrations

Use certified integrations and discovery methods with a goal to ingest 3rd party data, ensuring timeliness, integrity, and real-time visibility. This allows for the integration of diverse platforms, facilitating the efficient exchange of data and functionalities.

FEATURES/BENEFITS

- Confidently ingest 3rd party data
- Keep pace with dynamic multi-cloud environments
- Normalize and consolidate 3rd party data
- Leverage integrations across your IT landscape

KPIs

- ↑ Incident deflection
- ↑ Scalability
- ↑ Actionable insights
- ↑ Security compliance
- ↑ Multi-cloud strategy delivery
- ↓ Time to value

BEST PRACTICES

- Where possible, utilize existing APIs and connectors to transport data between systems.
- Leverage technologies across multiple solutions to create workflow efficiencies, reduce manual tasks, and create positive user experiences.

ivanti

Third Party Connectors, APIs & Integrations

THINGS TO CONSIDER

Is your 3rd party data trusted and secure?

□ Yes □ No

Do you leverage 3rd party data to fill in gaps that would otherwise result in manual tasks for your IT staff?

□ Yes □ No

Do you implement APIs and integrations to allow shared data across disparate systems, resulting in more complete processes?

□ Yes □ No

Are you continually reviewing opportunities to leverage APIs to create new value?

□ Yes □ No

Do you have an API and integration policy or a governance framework in place to help reduce risk?

□ Yes □ No

ivanti

FOUNDATIONS

Configuration Management Database (CMDB)

Centralize all configuration information including critical CIs and associated relationships into a managed configuration. Enable better business decisions with accurate and necessary information.

FEATURES/BENEFITS

- Improved IT estate lifecycle management
- Achieve data-driven outcomes
- Establish single source of truth
- Enhanced reporting and analytics
- Improved change management

KPIs

- ↑ Awareness and actionability
- ↑ Visibility
- ↑ Service quality
- ↑ Operational efficiencies
- ↓ Manual effort

BEST PRACTICES

- Automate CI information to populate your CMDB and integrate with other IT management tools, and to maintain up-to-date information.
- Define clear processes for change management to ensure stakeholders are involved in managing and utilizing the CMDB.

ivanti

Configuration Management Database (CMDB)

THINGS TO CONSIDER

Is your CMDB up-to-date and accurate based on your discovery methods?

□ Yes □ No

Do you have gaps in your discovery process?

□ Yes □ No

Are you manually adding non-discoverable assets?

□ Yes □ No

Are you able to scale your CMDB to meet future needs?

□ Yes □ No

Have you defined what components you want to manage in your CMDB that will add value and operational efficiencies while reducing risk and expense?

□ Yes □ No

ivanti

Reporting

Surface analytics on-demand to drive actionable insights. Take action with the latest data at your fingertips through customized reports and the ability to connect to other databases.

FEATURES/BENEFITS

- Immediate access to data
- Enhanced data visibility and integrity
- Improved data security through insights

KPIs

↑ Data-driven actions
↑ Operational efficiencies
↑ Visibility
↓ Manual effort

BEST PRACTICES

- Leverage insights and actions with the latest data to increase awareness and actionability.
- Transform from reactive to proactive with customized data sets across your organization on any database.
- Enable your field teams to create and run reports without IT assistance.

ivanti

Reporting

THINGS TO CONSIDER

Do you develop on demand self-service dashboards versus weekly automated excel reports?

□ Yes □ No

Do you measure how much time is spent on creating reports and dashboards?

□ Yes □ No

Have you built an intake process for business users to request reports?

□ Yes □ No

Do you leverage reporting tools with advanced visualization capabilities beyond spreadsheets?

□ Yes □ No

When you create reports, is the data current and error-free?

□ Yes □ No

ivanti
